

Designed for Scalability and Performance

A Hosted Solution Managed to The Highest Standards

Technical Highlights

R&D Logic’s unique platform offers business intelligence that enables finance and non-finance users to plan, monitor, analyze and, ultimately, manage performance across the R&D portfolio and the corporation as a whole.

R&D Logic robust software is architected for the web and uses multi-instance architecture with Oracle as the back-end engine. We deliver over the cloud, using the latest security standards.

We are continually investing in our technical platform to enhance the user experience and to ensure maximum stability, scalability and performance for our customers.

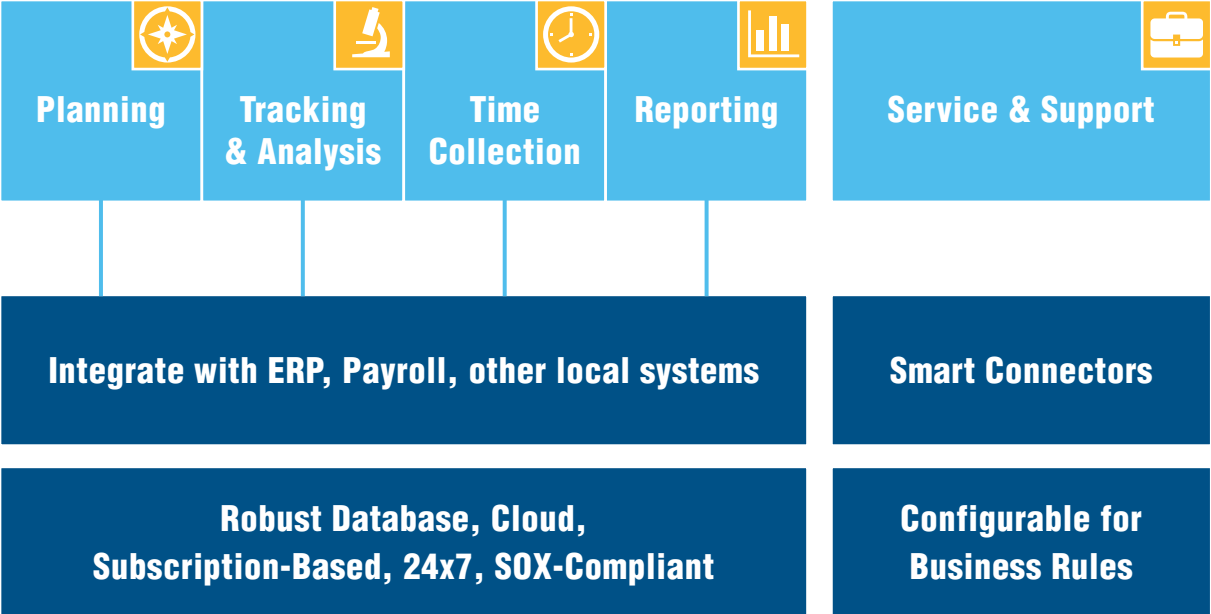

Our state of the art NTT America data center ensures high speed, high performing servers, ultimate security, backups, archives, recovery, and SOC compliance.

R&D Logic software integrates with local systems. Through our proprietary “Smart Connectors” technology, we connect data from ERP systems, payroll, HRIS, time collection, project plans, etc. This eliminates manual data entry and reconciliations while taking days off the month-end management reporting process and weeks off the financial planning cycle.

Our customers select from R&D Logic’s software suite only those functions relevant to their business. By configuring each installation, we can deliver specific scenario based software solutions.

Pay only for the functionality and services you need — scale functionality as your business evolves.

Of course, we offer all of this On-Demand — the ultimate in efficiency and cost effectiveness.
